

The Stamfag STAMDUR label cutting Die is the leader in performance and accuracy, by using high-tech materials and equipment.

Cutting Dies with high performance increase the dimensional accuracy:

High-speed labelling machines place high requirements against the accuracy of the labels. The given tolerances must be kept to achieve the required labeling performance. For high delivery volumes a STAMDUR tungsten carbide cutting Die is required. With a STAMDUR cutting Die you can achieve far over 100 million labels (depending upon paper quality), before wearing out the cutting edge and resulting in the label being outside it's allowable outside tolerances. When this occurs the Die must be resharpened.
