

foil stamping

TP Original Heidelberg automatic platen 10 $\frac{1}{4}$ x 15" (26 x 38 cm) with extra accessory for hot stamping with roll foils

Decorative ornaments in gold, silver or bright colour roll foils on greeting cards, deeds, luxury packages, letterheads, labels are a market with ever increasing sales figures. Foil stamping has replaced bronzing or printing gold and metallic colours. Previously greeting cards, for example, with relief embossing in gold

had to be done in three different operations: preprinting, bronzing/dusting and relief embossing.

The Heidelberg automatic stamping platens save preprinting and do foil and relief stamping in one sheet pass. Another field of operations of the Heidelberg automatic

platens for hot stamping with roll foils is the sealing of transparent foils for window packaging.

All these jobs can be done on the Heidelberg automatic platen 10 $\frac{1}{4}$ x 15" (26 x 38 cm) with extra accessory for stamping with roll foils (TP), or on the Heidelberg GTP special automatic platen for hot stamping with roll foils 13 $\frac{3}{8}$ x 18 $\frac{1}{8}$ " (34 x 46 cm), in superb quality and most economically.

The TP model is available in two versions: TP I for a foil up to 4" (10 cm), and TP II for a long pull up to 8.5" (21.5 cm). The TP II can thus operate across the whole width of an A4 page. A special accessory permits direct stamping from the slug (line of type). The maximum stamping area is 15.5 sq. inches (100 sq.cm).

Foil stamping device of TP I
