

Don't be "stuck" by that labelling problem—We can provide a "Swift" answer

#### USE and ADVANTAGES

This well established model of the 'Swift' range is available in 6" and larger sizes. It is a high speed machine capable of applying the CORRECT adhesive coating to all shapes and types of labels, and is equally essential in large and small factories where properly and efficiently labelled articles are desired.

The operator's hands are left entirely free for the maximum production of good work, and cleanliness is ensured by the obviation of paste pots and brushes. No skill is required in this scientific application of adhesive, which cuts costs, ensures efficient adhesion and quicker drying.

Where mobility is essential, a stand model is available.

#### PRACTICAL FEATURES

DOUBLE ROLLERS which control, apply, and constantly mix the adhesive, ensure a finely regulated and even coating—without scrapers.

WASH-UP in two minutes only, using built-in cleaning trough—no dismantling required.

COMPLETE SAFETY—All drives fully guarded. Gravity feed roller cannot cause injury.

ADJUSTABLE PICKERS and built-in setting gauge permit maximum working life.

RESILIENTLY MOUNTED electric motor reduces vibration and noise.

SELF-OILING bearings throughout.

SPARES completely interchangeable and immediately available.
