Telegrams: SWIFTGLUER - GLASGOW

This model is intended to operate in conjunction with 'SWIFT' Whole Surface Gluing Machines on the production of Show Cards, Picture Mounting, Case Making and other such similar work. It provides a very much more efficient method than Hand Rubbing Down, and obviously avoids damage to the printed surface. The upper roller is under spring pressure, the clearance between it and the lower roller being infinitely adjustable from nil to $\frac{3}{4}$ ". Light or heavy rolling pressure can therefore be applied to the work. The machine is supplied with either Single or Three Phase A.C. Motor Drive, and is fully guarded.
